edges along block boundaries, edge plaquettes free (ground state): Aztec II

(a) vertex model, 12×12, $E = 30J$ (b) $|\Psi|/\Psi_{\text{sat}}$, 48×48 (c) $\arg \Psi$, 48×48

edges along block boundaries, every plaquette forced into a tetromino (comparison)

(d) vertex model, 12×12, $E = 36J$ (e) $|\Psi|/\Psi_{\text{sat}}$, 48×48 (f) $\arg \Psi$, 48×48

edges through blocks: Aztec I

(g) vertex model, 12×12, $E = 30J$ (h) $|\Psi|/\Psi_{\text{sat}}$, 48×48 (i) $\arg \Psi$, 48×48
